

Saving time and money for users and installers of audible alarm devices was a major consideration during the development of our new line of sounders. The result is PATROL - with fresh innovation and advanced features that improve functionality and efficiency.

User advantages include:

- Safe and fast installation by one person – finally, a „third hand“ is no longer needed.
- „Self-guided“ assembly – practically impossible to incorrectly assemble and install.
- Superior acoustic „punch“ – with more sound concentrated at low frequencies, acoustic signals penetrate objects better and carry further, thereby reducing the numbers of units required.
- Matched flash intensity – for combination flashing sounders, higher dB rated sounders are complemented with higher energy flashing lights.
- Climate compatible for worldwide use – IP 66 rated with temperature range of -40 °C to +55 °C. Agency approvals – UL, Gost, VdS, CPD. For all applications – buildings, industrial facilities, machine control, indoor and outdoor.

Deliveries are made on the basis of the General Terms and Services of the ZVEI (Central Association of Electrical Engineering and Industry) Subject to technical amendments and misprints. This paper has been manufactured from chlorine-free bleached cellulose.

PATROL

Safe
Easy
Economical

Three Dimensional Innovation

SAFE –
an incorrect installation is virtually impossible

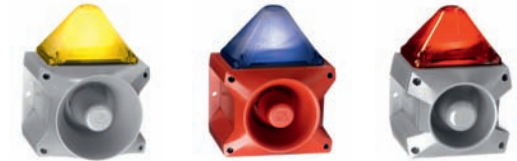

- Mechanical guides in the housing ensure proper assembly
- Molded, captive gasket ensures proper housing sealing every time
- Fastener holes are outside the sealing area – IP rating cannot be compromised
- No strain / pressure on the terminals, no „pinching“ of the wires due to the „junction box“ principle of electrical connection
- Fasteners support optional „tamper proof“ sealing

EASY –
significantly shorter assembly and installation times

- Cable entries on all sides support multiple installation options
- Sounder module and base are not screwed together upon delivery – eliminating time-consuming dismantling
- A single terminal block in the base supports all wiring connections
- Sounder modules auto connect with self-guided contact pins
- Captive 3/8-turn fasteners work quickly and won't get lost

ECONOMICAL –
extremely high efficiency and good penetration of acoustical obstacles significantly reduce the required number of sounders

- Corridor-alarms instead of alerting each single room
- All screw terminal clamps are redundant to support daisy-chaining of multiple sounders
- Internal and external mounting capabilities
- Panel mounting and surface mounting capabilities
- Also available as Sounder/Flash combinations with matched coverage of light and sound
- Lights are pre-wired to the sounder terminal block

Simple and efficient with PATROL:

- Assemble bottom part
- Insert connection cable
- Wire cable in bottom part
- Place upper part
- Tighten 3/8 fasteners
- Done!
